Let's have a look at what are features of popular dog stage on TheWeRateDogs, using numerator (rating of dog given by TheWeRateDogs), favorites and retweets. As we see majority of dogs are puppers, but can we say that it is also popular and well rated dog stage?

We may assume that, the most favorite way to express your attitude to dog published is still through marking it as ,favorite'. On average, the most ,favorite' dog stage seems to be ,puppo' which received more than 20,000 favorites. The dog stage, which received the lowest average amount of favorites is ,pupper'.

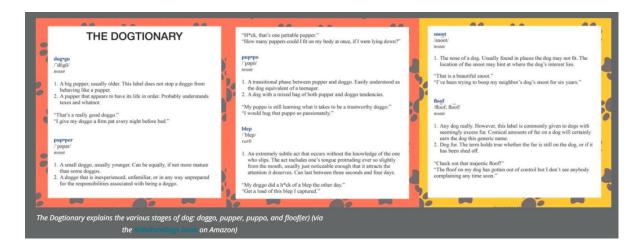

Secondly, twitter users **love to repost tweets of ,doggo' and ,puppo'**, as they were on average retweeted more than 7,000 times. The least average retweets had ,pupper', what is interesting as this is again the least interesting dog stage, even though the largest one.

The third parameter is numerator rating. It is the rating given by TheWeRateDogs to almost each dog published. It is almost always more than 10. The stage **,puppo' had the highest numerator rating** (12.04), followed by ,doggo' (11.89) and ,floofer' (11.88) at nearly same level and finally ,pupper' (10.72).

We may conclude, that the **most popular dog stage might be ,puppo'**, more understandable, based on Doctionary, **dog teenager**.

When you think about how to name your little cute puppy maybe you would appreciate the information that Charlie, Lucy, Oliver, Cooper and Penny belong to the most used and favorite names. If you prefer something unique, avoid those names definitely. Yogi might sounds nice for dog, but please do not shout in Jellystone park. You never know who might come.

Last but not least, 98% data analyzed were gained through user's ihpone. Not very surprising conclusion though, everybody uses smart phone, everywhere and anytime to communicate, like and share.

Do not forget, they're good dogs Brent.
